PARAMETER NAME	DESCRIPTION
namePrefix	String used as a base for naming resources (6 alphanumeric characters or less). A unique hash is prepended to the string for some resources, while resource-specific information is appended.
adminUsername	Administrator username of each deployed VM (alphanumeric characters only)
adminPassword	Administrator password for each deployed VM
ethereumAccountPsswd	Password used to secure the default Ethereum account that will be generated
ethereumAccountPassphrase	Password used to generate the private key associated with the default Ethereum account that is generated. Consider a password with sufficient randomness to ensure a strong private key
ethereumNetworkID	Private Ethereum network ID to which to connect (max 9 digit number)
numConsortiumMembers	Number of members within the network. Each member's nodes live in their own subnet.
numMiningNodesPerMember	Number of mining nodes to create for each consortium member.
mnNodeVMSize	Size of the virtual machine used for mining nodes
numTXNodes	Number of load balanced transaction nodes

| txNodeVMSize | Size of the virtual machine for transaction nodes |
